

Microbial Biodegradation

From Omics to Function and
Application

Available now!!

Edited by: Jerzy Długoński

x + 238pp pages, September 2016

Book: ISBN 978-1-910190-45-6, £159 / US
\$319

Ebook: ISBN 978-1-910190-46-3, £159 /
US\$319

Essential reading for scientists working in the field of biodegradation and bioremediation.

In this timely book, expert authors critically review the most important current research in this exciting field. Essential reading for scientists working in the field of microbial degradation and bioremediation and recommended reading for everyone interested in environmental microbiology, biotechnology and molecular biology.

Topics

- Organic Pollutants Degradation by Microorganisms: Genomics, Metagenomics and Metatranscriptomics Backgrounds.
- Heavy Metals Resistance, Metabolism and Transformation: Genomic, Metagenomic and Metatranscriptomic Studies.
- Molecular Markers in Biodegradation Processes.
- Metabolomics and Crucial Enzymes in Microbial Degradation of Contaminants.
- Proteomics as a Tool for Metabolic Pathways Inspection in Microbial Cells.
- Lipidomics in Studies on Adaptation Mechanisms of Microorganisms to the Toxic Effects of Hazardous Compounds.
- Microbial Elimination of Endocrine Disrupting Compounds.
- Dyes Decolourisation and Degradation by Microorganisms.
- Novel Insights into Polycyclic Aromatic Hydrocarbon Biodegradation Pathways Using Systems Biology and Bioinformatics.
- Biosurfactant Enhancement Factors in Microbial Degradation Processes.
- Microorganisms Application for Volatile Compounds Degradation.
- Heavy Metals Removal by Microbial Cells.
- Application of Recent Omics Achievements in Bioremediation Processes Illustrated by Progress in Microbial Surfactants Commercialization.
