x + 290 pp. £159, \$319. Book: 978-1-910190-47-0. Ebook: 978-1-910190-48-7

The book is recommended to readers seeking an overview on chloroplast biology as well as scientists looking for detailed up-to-date information.

This authoritative book reflects the diversity of the research field on chloroplast biology ranging from the biophysical principles of energy conversion over metabolic regulation and ion transport to identification of unique plastid proteins by the systems-biology based green cut project. The chapters are written by renowned experts in their fields and provide state-of-the-art overviews of their current research. Each chapter ends with a section on future trends that projects where the research could be in the next five to ten years.

- **Chapter 1:** Chloroplast Lipids.
- **Chapter 2:** Assembly and Degradation of Pigment-binding Proteins.
- **Chapter 3:** Structural and Functional Dynamics of the Thylakoid Membrane System.
- **Chapter 4:** Distinct Energetics and Regulatory Functions of the Two Major Cyclic Electron Flow Pathways in Chloroplasts.
- **Chapter 5:** Modeling Electron and Proton Transport in Chloroplasts.
- **Chapter 6:** New Players for Photoprotection and Light Acclimation.
- **Chapter 7:** Photoinhibition and the Damage-Repair Cycle of Photosystem II.
- **Chapter 8:** Plastoglobules: Lipid Droplets at the Thylakoid Membrane.
- **Chapter 9:** Redox Regulation in Chloroplasts.
- **Chapter 10:** The Transporters of Plastids - New Insights into an Old Field.
- **Chapter 11:** The GreenCut - Functions and Relationships of Proteins Conserved in Green Lineage Organisms.
