Highly informative and well referenced, this book is essential reading for all influenza specialists

Following on from their highly-acclaimed 2010 book, Drs. Wang and Tao present a new, up-to-date and comprehensive review of current advancements in molecular influenza virology. Highly informative and well referenced, this book is essential reading for all influenza specialists and is recommended reading for all virologists, immunologists, molecular biologists, public health scientists and research scientists in pharmaceutical companies.

Topics

• Stem-specific Broadly Neutralizing Antibodies of Influenza Virus Hemagglutinin.
• Influenza Virus Replication and Transcription.
• Recent Progress in Understanding Influenza B Virus Hemagglutinin.
• Structure and Assembly of the Influenza A Virus Ribonucleoprotein Complex.
• Host Factors Regulating the Influenza Virus Replication Machinery.
• Receptor Specificity in Surveillance of Natural Sequence Evolution of Influenza A Virus Hemagglutinin.
• PB1-F2: A Multi-functional Non-structural Influenza A Virus Protein.
• Avian Influenza H7N9 Virus.
