The double-stranded (ds)RNA viruses represent a diverse group of viruses that vary widely in host range (humans, animals, plants, fungi, and bacteria), genome segment number (one to twelve), and virion organization (T-number, capsid layers, or turrets). Members of this fascinating group include the rotaviruses, renowned globally as the commonest cause of gastroenteritis in young children, and bluetongue virus, an economically important pathogen of cattle and sheep. In recent years, remarkable progress has been made in determining, at atomic and subnanometeric levels, the structures of a number of key viral proteins and of the virion capsids of several dsRNA viruses, highlighting the significant parallels in the structure and replicative processes of many of these viruses. By providing unique insights into fundamental aspects of structure-function relationships in virus particles, virus particle assembly, virus-cell interactions, and viral pathogenesis, approaches for the development of novel antiviral strategies and/or agents can be designed.

This timely book brings together all of the key recent research on this disparate group of viruses, providing for the first time a single resource reviewing dsRNA viral structure and molecular biology. Written by well respected and experienced virologists, topics include: the structures of orthoreoviruses, rotavirus, phytoreoviruses, and bluetongue virus, entry into the bacterial cell, crystal structure of reovirus polymerase λ3, assembly of the reovirus genome, genomic RNA packaging and replication in the Cystoviridae, and much more. Essential reading for all dsRNA virologists and all other virologists with an interest in molecular and structural biology.

Chapter 1. The Structure of Orthoreoviruses. Kelly A. Dryden, Kevin M. Coombs and Mark Yeager
Chapter 2. Cypovirus. Z. Hong Zhou
Chapter 3. Rotavirus Structure. Xiaofang Jiang, Sue E. Crawford, Mary K. Estes and B. V. Venkataram Prasad
Chapter 4. Structure and Function of Bluetongue Virus and its Proteins. Polly Roy
Chapter 5. Structures of Phytooreoviruses. Matthew L. Baker, Z. Hong Zhou and Wah Chiu
Chapter 7. Dissecting the Assembly Pathway of Bacterial dsRNA Viruses: Infectious Nucleocapsids Produced by Self-Assembly. Minna M. Poranen, Roman Tuma and Dennis H. Bamford
Chapter 8. Infectious Bursal Disease Virus (IBDV): A Segmented Double-Stranded RNA Virus With a T=13 Capsid That Lacks a T=1 Core... José R. Castón, José F. Rodríguez and José L. Carrascosa
Chapter 10. Structure and Functions of the Orthoreovirus σ3 Protein. Leslie A. Schiff
Chapter 12. Entry of a Segmented dsRNA Virus Into the Bacterial Cell. Minna M. Poranen and Dennis H. Bamford
Chapter 17. Function and Structure of Rotavirus NSP3. Michelle M. Becker, Stefan T. Arolf, Stephen K. Burley, Rahul C. Deo, Caroline M. Groff, Damien Vitour and Didier Poncet
Chapter 18. Analyses of Rotavirus NSP4 Genetic Groups, Structure, and Function. Judith M. Ball, Rebecca D. Farr and Clarence E. Schutt
Chapter 20. Genomic RNA Packaging and Replication in the Cystoviridae. Leonard Mindich
