Bacteriocins are potent protein toxins produced by virtually every bacterial and archael species examined to date. These bactericidal peptides play an important role in regulating competitive interactions in natural microbial systems. From the perspective of human health, the bacteriocins represent a library of potential lead compounds honed over three billion years of evolution. Their narrow target range, high activity, surprising stability and low toxicity position them as viable alternatives or complements to existing small molecule antibiotics. The rise of antibiotic resistant pathogens and the growing awareness of the importance of the microbiome to human health underscores the need for this new class of antimicrobials, emblematic of a new approach to the treatment of infectious disease.

In this volume, a range of experts explore our current understanding of the biology of these important compounds, and identify the prospects for their use in medical and veterinary applications. In so doing, this volume introduces the vast diversity of bacteriocin molecules and mechanisms and brings readers to the cutting edge of a new 21st century approach to antibiotic discovery and design. Topics covered include: the natural history of bacteriocins; killing strategies and applications of microcins; the mode of action of nuclease colicins; the role of the van der Waals zone in the design of a new family of bacteriocins; the use of pyocins in the treatment of infections; the role of streptococcal bacteriocins as oral probiotics; veterinary applications of bacteriocins (nisin) in treating mastitis, and an exploration of the genetics of bacteriocin resistance.

This volume is essential reading for everyone involved in antimicrobial research in academia, biotechnology companies, and the pharmaceutical industry and a recommended volume for all microbiology libraries.

Chapter 1. The Natural History of Bacteriocins (David M. Gordon)
Chapter 2.  Microcins and Other Bacteriocins: Bridging the Gaps Between Killing Strategies, Ecology and Applications (Sylvie Rebuffat)
Chapter 3. Nuclease Colicins: Mode of Action, Immunity and Mechanism of Import into Escherichia coli (Justyna A. Wojdyła, Grigorios Papadakos and Colin Kleanthous)
Chapter 4. Capturing the Power of Van der Waals Zone in the Creation of a Novel Family of Bacteriocin-based Antibiotics (Xiao-Qing Qiu and Margaret A. Riley)
Chapter 5. The Use of Pyocins in Treating Pseudomonas aeruginosa Infections (Suphan Bakkal)
Chapter 7. Treating Bovine Mastitis with Nisin: A Model for the Use of Protein Antimicrobials in Veterinary Medicine (Sandra M. Roy, Margaret A. Riley and Joseph H. Crabb)
Chapter 8. The Phenotypic and Genotypic Landscape of Colicin Resistance (Adrienne Kicza, Christine Pureka, Diana Proctor, Margaret Riley and Robert Dorit)

Porcine Viruses: From Pathogenesis to Strategies for Control
Edited by: Hovakim Zakaryan (Published: 2019)

Lactobacillus Genomics and Metabolic Engineering
Edited by: Sandra M. Ruzal (Published: 2019)

Cyanobacteria: Signaling and Regulation Systems
Author: Dmitry A. Los (Published: 2018)

Viruses of Microorganisms
Edited by: Paul Hyman and Stephen T. Abedon (Published: 2018)

Protozoan Parasitism: From Omics to Prevention and Control
Edited by: Luis Miguel de Pablos Torró and Jacob-Lorenzo Morales (Published: 2018)

Genes, Genetics and Transgenics for Virus Resistance in Plants
Edited by: Basavaprabhu L. Patil (Published: 2018)

DNA Tumour Viruses: Virology, Pathogenesis and Vaccines
Edited by: Sally Roberts (Published: 2018)

Pathogenic Escherichia coli: Evolution, Omics, Detection and Control
Edited by: Pina M. Fratamico, Yanhong Liu and Christopher H. Sommers (Published: 2018)

Postgraduate Handbook: A Comprehensive Guide for PhD and Master’s Students and their Supervisors
Author: Aceme Nyika (Published: 2018)

Enteroviruses: Omics, Molecular Biology, and Control
Edited by: William T. Jackson and Carolyn B. Coyne (Published: 2018)
“frontiers in the study of the 12 species of the genus” (ProtoView); “the current most important enterovirus research” (Biotechnol. Agron. Soc. Environ.)

Molecular Biology of Kinetoplastid Parasites
Edited by: Hemanta K. Majumder (Published: 2018)

Bacterial Evasion of the Host Immune System
Edited by: Pedro Escoll (Published: 2017)
“The figures are expertly drawn” (SIMB News)

Illustrated Dictionary of Parasitology in the Post-Genomic Era
Author: Hany M. Elsheikha and Edward L. Jarroll (Published: 2017)
“a guide for students, academic staff, medical and veterinarian professionals” (ProtoView); “an extensive and comprehensive glossary of contemporary concepts, terminologies, and vocabulary in modern parasitology” (Doodys); “a pure pleasure to explore and discover” (Epidemiol. Infect.); “highly recommended” (Biotechnol. Agron. Soc. Environ.)

Next-generation Sequencing and Bioinformatics for Plant Science
Edited by: Vijai Bhadauria (Published: 2017)

The CRISPR/Cas System: Emerging Technology and Application
Edited by: Muhammad Jamal (Published: 2017)
“reviews recent advances” (ProtoView)

Brewing Microbiology: Current Research, Omics and Microbial Ecology
Edited by: Nicholas A. Bokulich and Charles W. Bamforth (Published: 2017)
“a valuable information source ... an authoritative overview” (IMA Fungus); “a must read book” (SIMB News)

Metagenomics: Current Advances and Emerging Concepts
Edited by: Diana Marco (Published: 2017)
“presents those new to the field with important aspects of metagenomics” (Eur. J. Soil Sci.)

Bacillus: Cellular and Molecular Biology (Third edition)
Edited by: Peter L. Graumann (Published: 2017)
“a one-stop shop for a huge range of Bacillus-focused molecular biology” (Microbiology Today)
