

Climate Change and Microbial Ecology

Current Research and Future Trends

Edited by: Jürgen Marxsen (*Justus Liebig University, Giessen, Germany*)

Published March 2016

www.caister.com/climate

x + 204 pp. £159, \$319. Book: 978-1-910190-31-9. Ebook: 978-1-910190-32-6

In this book, a broad range of renowned scientists reviews the most important hot-topics in the area of climate change and microbial ecology, thus providing a timely and authoritative overview of this increasingly important area. Individual chapters cover the various ecosystems on Earth as well as the different groups of microorganisms with respect to different cycles of matter. In addition, special chapters cover applied aspects, such as land-use and geoengineering.

This is an essential book for every microbial ecologist from the PhD student to the experienced scientist and is also recommended for everyone interested in the field of global climate change.

- **Chapter 1:** Impacts of Climate Change on Cyanobacteria in Aquatic Environments.
- **Chapter 2:** Climate Change Effects on Planktonic Bacterial Communities in the Ocean: From Structure and Function to Long-term and Large Scale Observations.
- **Chapter 3:** Protozoans and Global Climate Change in Aquatic Systems.
- **Chapter 4:** Impact of Climate Change on Aquatic Hypho- and Terrestrial Macromycetes.
- **Chapter 5:** Aquatic Viruses and Global Climate Change.
- **Chapter 6:** Microbes in Aquatic Biofilms Under the Effect of Changing Climate.
- **Chapter 7:** Climate Change, Microbes, and Soil Carbon Cycling.
- **Chapter 8:** Climate Change and Nitrogen Turnover in Soils and Aquatic Environments.
- **Chapter 9:** Ecosystem Metabolism in River Networks and Global Climate Change.
- **Chapter 10:** Microbes, Environmental Change and the Global Carbon Cycle.
- **Chapter 11:** Microbial Communities and Processes Under Climate and Land-use Change in the Tropics.
- **Chapter 12:** Options for Geoengineering the Climate via Microorganisms: A Peatland Case Study.
