Climate Change and Microbial Ecology
Current Research and Future Trends (Second Edition)

Edited by: Jürgen Marxsen
Justus Liebig University, Giessen, Germany

Published: October 2020. Pages: xiv +548
Price: £199, $250
Published by: Caister Academic Press www.caister.com

The distribution and function of microorganisms are of crucial importance for the Earth's biogeochemical cycles. Effects of microbial communities on the carbon and nitrogen cycles are particularly important for climate gases. These biogeochemical cycles are significantly impacted by global climate change and microbes may respond by accelerating or alleviating human-caused change. Understanding microbial ecology in the different ecosystems is essential for our ability to assess the importance of biogeochemical cycles-climate feedbacks.

In the first edition of this acclaimed book, a broad range of renowned scientists reviewed the most important hot-topics in the area of climate change and microbial ecology, thus providing a timely and authoritative overview of this increasingly important area. Climate change is continuing unabated and this new, expanded edition contains revised and updated chapters and the addition of four new chapters covering more of the topical fields in this important area of climate science.

This is an essential book for every microbial ecologist from the PhD student to the experienced scientist and is also recommended for everyone interested in the field of global climate change.

Chapter 1. Impacts of Climate Change on Cyanobacteria in Aquatic Environments (Hans W. Paerl)
Chapter 2. Climate Change Effects on Planktonic Bacterial Communities in the Ocean: From Structure and Function to Long-term and Large-scale Observations (Ingrid Brettar, Manfred G. Höfte, Carla Pruzzo and Luigi Vezzulli)
Chapter 3. Climate Change, Microbial Communities and Agriculture in Semiarid and Arid Ecosystems (Felipe Bastida, Alfonso Vera, Marta Díez, Carlos García, Antonio Ruiz-Navarro and José Luis Moreno)
Chapter 4. Responses of Aquatic Protozoans to Climate Change (Hartmut Arndt and Mar Monsonis Nomdedeu)
Chapter 5. Terrestrial Fungi and Global Climate Change (Irina Sidorova and Elena Voronina)
Chapter 6. Impact of Climate Change on Aquatic Hyphomycetes (Verónica Ferreira)
Chapter 7. Aquatic Viruses and Climate Change (Rui Zhang, Markus G. Weinbauer and Peter Peduzzi)
Chapter 8. Microbes in Aquatic Biofilms under the Effect of Changing Climate (Anna M. Romani, Stéphanie Boullétreau, Verónica Díaz Villanueva, Frédéric Garabetian, Jürgen Marxsen, Helge Norf, Elisabeth Pohlon and Markus Weitere)
Chapter 10. Environmental Change and Microbial Contributions to Carbon Cycle Feedbacks (Lei Qin, Hojeong Kang, Chris Freeman, Juanita Mora-Gómez and Ming Jiang)
Chapter 11. Climate Change and Nitrogen Turnover in Soils and Aquatic Environments (Gero Benckiser)
Chapter 12. Changes in Precipitation Patterns: Responses and Strategies from Streambed Sediment and Soil Microbes (Giulia Gionchetta, Aline Frossard, Luis Barheras and Anna Maria Romani)
Chapter 13. Groundwater Microbial Communities in Times of Climate Change (Alice Retter, Clemens Karwautz and Christian Griebler)
Chapter 14. Ecosystem Metabolism in River Networks and Climate Change (Vicenç Ajuña, Anna Freixa, Rafael Marcé and Xisca Timoner)
Chapter 15. Microbial Communities and Processes under Climate and Land-use Change in the Tropics (Stephen A. Wood, Krista McGuire and Jonathan E. Hickman)
Chapter 16. Geoengineering the Climate via Microorganisms: a Peatland Case Study (Christian Dunn, Nathalie Fenner, Anil Shirsat and Chris Freeman)

Lyme Disease and Relapsing Fever Spirochetes: Genomics, Molecular Biology, Host Interactions and Disease Pathogenesis
Edited by: Justin D. Radolf and D. Scott Samuels (Published: 2021)

Veterinary Vaccines: Current Innovations and Future Trends
Edited by: Laurel J. Gershwin and Amelia R. Woolums (Published: 2020)

Climate Change and Microbial Ecology: Current Research and Future Trends (Second Edition)
Edited by: Jürgen Marxsen (Published: 2020)

Alphaherpesviruses: Molecular Biology, Host Interactions and Control
Edited by: Ekaterina E. Heldwein and Gregory A. Smith (Published: 2020)

Legionellosis Diagnosis and Control in the Genomic Era
Edited by: Jacob Moran-Gilad and Rachel E. Gibbs (Published: 2020)

Bacterial Viruses: Exploitation for Biocontrol and Therapeutics
Edited by: Aidan Coffey and Colin Buttimer (Published: 2020)

Microbial Biofilms: Current Research and Practical Implications
Edited by: Arindam Mitra (Published: 2020)
“for graduate students and researchers” (Ringgold)

Astrobiology: Current, Evolving and Emerging Perspectives
Edited by: André Antunes (Published: 2020)
an up-to-date insight into current topics and research work ... a very good introduction to interested readers (BioSpektrum);
“recent theoretical and experimental results” (Ringgold)

Chlamydia Biology: From Genome to Disease
Edited by: Ming Tan, Johannes H. Hegemann and Christine Süsterlin (Published: 2020)
“The book as a whole is recommended to research students, doctoral students and scientists” (Biospektrum);
a current and comprehensive summary of Chlamydia research” (Doody); “a broad reference on the bacterial pathogen Chlamydia and the human and animal disease it causes” (Ringgold)

Microbial Exopolysaccharides: Current Research and Developments
Edited by: Özlem Ates Duru (Published: 2019)
of immense value for PhD students, postdoctorate students, microbiologists, and experienced scientists” (Doody)

Polymerase Chain Reaction: Theory and Technology
Author: Mark A. Behlke, Kornelia Berghof-Jäger, Tom Brown, et al. (Published: 2019)

Pathogenic Streptococci: From Genomics to Systems Biology and Control
Edited by: Yuqing Li and Xuedong Zhou (Published: 2019)

Bats and Viruses: Current Research and Future Trends
Edited by: Eugenia Corrales-Aguilar and Martin Schwemmle (Published: 2020)
“highly recommended” (Southeastern Naturalist)

SUMOylation and Ubiquitination: Current and Emerging Concepts
Edited by: Van G. Wilson (Published: 2019)
a comprehensive, in-depth resource ... intensive and technically detailed descriptions of the latest advances ... densely packed with information ... a valuable reference for any laboratory group working in this field” (Doody)

Avian Virology: Current Research and Future Trends
Edited by: Siba K. Samal (Published: 2019)
a nice introduction to avian virology” (Doody); “this book is a must-have for anyone whose daily activities require detailed knowledge of the biology, pathogenesis, immune response, prevention, and control of avian viruses” (JAVMA)

Insect Molecular Virology: Advances and Emerging Trends
Edited by: Bryony C. Bonning (Published: 2019)
“essential reading for students and scholars of insect virology” (Biotechnol. Agron. Soc. Environ.)

The Prion Protein
Edited by: Jörg Tatzelt (Published: 2010)

Plant Genomics
Edited by: Hany A. El-Shemy (Published: 2009)
