

# Cyanobacteria

## Omics and Manipulation

**Edited by: Dmitry A. Los**

*Institute of Plant Physiology, Russian Academy of Sciences, Botanicheskaya Street 35, 127276 Moscow, Russia*

**Published:** January 2017. **Pages:** vi + 256

**ISBN:** Book: 978-1-910190-55-5. Ebook: 978-1-910190-56-2 £159, \$319

**Published by:** Caister Academic Press [www.caister.com](http://www.caister.com)

In this era of the 'Green Planet', cyanobacteria are ideally placed for exploitation as microbial cell factories, both for carbon capture and storage and for the sustainable production of secondary metabolites and biofuels. The application of omics technologies to cyanobacterial research has yielded a wealth of new information. However for today's busy researchers, trawling through the literature to stay abreast of current developments can be extremely time-consuming. By compiling and summarising the most important topics on cyanobacterial omics and manipulation, the authors of this book provide the reader with a timely overview of the field.

Topics covered: The cyanobacterial core-genome with a focus on secondary metabolites; cyanobacterial evolution; genomics of NRPS/PKS biosynthetic gene clusters; RNA-seq based transcriptomic analysis of single cyanobacterial cells; transcriptomics of the responses: genes, sensors, and molecular triggers; transcriptomic and proteomic analysis of diurnal cycles in nitrogen-fixing cyanobacteria; proteomic analysis of post translational modifications; metabolic engineering and systems biology for free fatty acid production; isoprene production; ethanol production: impact of omics of the model organism *Synechocystis* on yield enhancement; engineering of alkane production; photoautotrophic polyhydroxyalkanoate production.

This cutting-edge text will serve as a valuable resource for all those working in this field and is recommended for all microbiology libraries.

**Chapter 1.** The Cyanobacterial Core-genome: Global and Specific Features with a Focus on Secondary Metabolites (*Stefan Simm, Enrico Schleiff and Rafael Pernil*)

**Chapter 2.** Genome-wide Analysis of Cyanobacterial Evolution: The Example of *Synechococcus* (*Petr Dvorák*)

**Chapter 3.** Genomics of NRPS/PKS Biosynthetic Gene Clusters in Cyanobacteria (*Claire Pancrace, Muriel Gugger and Alexandra Calteau*)

**Chapter 4.** RNA-seq Based Transcriptomic Analysis of Single Cyanobacterial Cells (*Zixi Chen, Jiangxin Wang, Lei Chen and Weiwen Zhang*)

**Chapter 5.** Transcriptomics of Cyanobacterial Stress Responses: Genes, Sensors, and Molecular Triggers (*Maria A. Sinetova, Anna A. Zorina, Kirill S. Mironov and Dmitry A. Los*)

**Chapter 6.** Transcriptomic and Proteomic Analysis to Understand Systems-level Properties of Diurnal Cycles in Nitrogen-fixing Cyanobacteria (*Uma K. Aryal and Louis A. Sherman*)

**Chapter 7.** Proteomic Analysis of Post Translational Modifications in Cyanobacteria (*Qian Xiong, Zhuo Chen and Feng Ge*)

**Chapter 8.** Metabolic Engineering and Systems Biology for Free Fatty Acid Production in Cyanobacteria (*Anne M. Ruffing*)

**Chapter 9.** Terpene Hydrocarbons Production in Cyanobacteria (*Anastasios Melis*)

**Chapter 10.** Ethanol Production in Cyanobacteria: Impact of Omics of the Model Organism *Synechocystis* on Yield Enhancement (*J. Tony Pembroke, Lorraine Quinn, Helen O'Riordan, Con Sheahan and Patricia Armshaw*)

**Chapter 11.** Engineering of Alkane Production in Cyanobacteria (*Xuefeng Lu and Weihua Wang*)

**Chapter 12.** Photoautotrophic Polyhydroxyalkanoate Production in Cyanobacteria (*Ka-Kei Sam, Nyok-Sean Lau, Amirul Al-Ashraf Abdullah and Minami Matsui*)
