

Genomic Technologies

Present and Future

Edited by: David J. Galas and Stephen J. McCormack

Keck Graduate Institute, Claremont, CA 91711, USA and AlleCure, Valencia, CA 91355, USA; respectively

Published: July 2002. **Pages:** viii + 418

Hardback: ISBN 978-0-9542464-2-6 £159, \$319

Published by: Caister Academic Press www.caister.com

The chapters in this book reflect the range of technical advances and their applications that are currently transforming biology. Topics covered include the application of computational methods, the robotics of modern automation methodologies, the new chemical and imaging methods that reveal chromosome structure and elucidate gene function, and the emergence of evolutionary and functional information by comparative genomics. Eminent international scientists describe in detail the new technology necessary to study the entire genome in a holistic manner and all the high throughput and large-scale experimental methodologies currently being used in genomic science. In addition the authors describe the progress of the newest technologies that are currently being developed. Written by experts in the field, this concise yet informative volume covers all aspects of technology pertaining to genomic studies. An essential book for anyone involved in genomic science.

Readership: bioscientists, molecular biologists, biotechnologists, geneticists, human, animal and plant geneticists, microbiologists, genome scientists. An essential book for anyone involved in genomic science.

Chapter 1. An Historical Perspective on Genomic Technologies. *David J. Galas and Stephen J. McCormack*

Chapter 2. Molecular Cytogenetics and Human Genome Function. *Pierre P. Massion and Joe W. Gray*

Chapter 3. Genome Comparison Techniques. *Lisa Stubbs*

Chapter 4. Impact of Transgenic Technologies on Functional Genomics. *Cooduvalli S. Shashikant and Frank H. Ruddle*

Chapter 5. Present and Future Tags and Labels in High Throughput Genomic Analysis. *Jeffrey Van Ness*

Chapter 6. MAGICChip: Properties and Applications in Genomic Studies. *Alexander Kolchinsky and Andrei Mirzabekov*

Chapter 7. Mass Spectrometry of Nucleic Acids. *Zhaojing Meng and Patrick A. Limbach*

Chapter 8. Detection of Single Nucleotide Polymorphisms. *Pui-Yan Kwok*

Chapter 9. Live Cell Assays: Tools for Functional Genomics. *Gregory W. Henkel*

Chapter 10. Automation and Robotics in Genomics Laboratories. *Theodore E. Mifflin, Steven D. Hamilton, Gary W. Kramer, and Robin A. Felder*

Chapter 11. Computational DNA Sequence Analysis and Annotation. *Hyatt, D. and Uberbacher, E.C.*

Chapter 12. Beyond Sequence Similarity, or Sequence Analysis in the Age of the Genome. *Itai Yanai, Adnan Derti and Charles DeLisi*
