The global demand for more, affordable, safe, and exotic foods in recent years has led to the increased use of intensive farming: this is closely associated with increased outbreaks of a variety of animal and zoonotic diseases. In addition to infectious diseases, cancer in animals is of key importance and research in this area has applications in humans that can be more relevant than studies from murine models. The urgent need for the development of new efficacious vaccines to control animal diseases has never been clearer.

This concise book captures the essence of current and future shifts in vaccine development research that will likely transform our understanding of methods to stimulate specific and protective immune responses to infectious diseases, and to offer improved therapeutic applications for oncology patients. The book opens with a chapter on reverse vaccinology and systems vaccinology approaches that should lead to more effective vaccines with fewer side effects. This is followed by a chapter describing recent developments in cancer immunotherapy and vaccination. Additional chapters provide updates on mucosal vaccines in the bovine context, adjuvants, transboundary diseases of livestock, and maternal and neonatal immunization. The book closes with a timely discussion of the newest vaccine modality currently being evaluated to control the human COVID19 pandemic, mRNA vaccines.

This book is essential reading for everyone working with vaccine development, from the PhD student to the experienced scientist, in academia, the pharmaceutical or biotechnology industries, and in clinical environments.
CURRENT BOOKS OF INTEREST

☞ Veterinary Vaccines: Current Innovations and Future Trends
Edited by: Laurel J. Gershwin and Amelia R. Woolums (Published: 2020)

☞ Climate Change and Microbial Ecology: Current Research and Future Trends (Second Edition)
Edited by: Jürgen Marxsen (Published: 2020)

☞ Alphaherpesviruses: Molecular Biology, Host Interactions and Control
Edited by: Ekaterina E. Heldwein and Gregory A. Smith (Published: 2020)

☞ Legionellosis Diagnosis and Control in the Genomic Era
Edited by: Jacob Moran-Gilad and Rachel E. Gibbs (Published: 2020)

☞ Bacterial Viruses: Exploitation for Biocontrol and Therapeutics
Edited by: Aidan Coffey and Colin Buttimer (Published: 2020)

☞ Microbial Biofilms: Current Research and Practical Implications
Edited by: Arindam Mitra (Published: 2020)

☞ Astrobiology: Current, Evolving and Emerging Perspectives
Edited by: André Antunes (Published: 2020)
an up-to-date insight into current topics and research work ... a very good introduction to interested readers (BioSpektrum)

☞ Chlamydia Biology: From Genome to Disease
Edited by: Ming Tan, Johannes H. Hegemann and Christine Süttterlin (Published: 2020)
"The book as a whole is recommended to research students, doctoral students and scientists" (Biospektrum); "a current and comprehensive summary of Chlamydia research" (Doodys)

☞ Microbial Exopolysaccharides: Current Research and Developments
Edited by: Özlem Ates Duru (Published: 2019)
"of immense value for PhD students, postdoctorate students, microbiologists, and experienced scientists" (Doody's)

☞ Polymerase Chain Reaction: Theory and Technology
Author: Mark A. Behlke, Kornelia Berghof-Jäger, Tom Brown, et al. (Published: 2019)

☞ Pathogenic Streptococci: From Genomics to Systems Biology and Control
Edited by: Yiqing Li and Xuedong Zhou (Published: 2019)

☞ Bats and Viruses: Current Research and Future Trends
Edited by: Yuqing Li and Xuedong Zhou (Published: 2019)

☞ SUMOylation and Ubiquitination: Current and Emerging Concepts
Edited by: Van G. Wilson (Published: 2019)
"a comprehensive, in-depth resource ... intensive and technically detailed descriptions of the latest advances ... densely packed with information ... a valuable reference for any laboratory group working in this field" (Doody's)

☞ Avian Virology: Current Research and Future Trends
Edited by: Siba K. Samal (Published: 2019)
"a nice introduction to avian virology" (Doody's); "this book is a must-have for anyone whose daily activities require detailed knowledge of the biology, pathogenesis, immune response, prevention, and control of avian viruses" (JAVMA)

☞ Insect Molecular Virology: Advances and Emerging Trends
Edited by: Bryony C. Bonning (Published: 2019)
"essential reading for students and scholars of insect virology" (Biotechnol. Agron. Soc. Environ.)

☞ The Prion Protein
Edited by: Jörg Tatzelt (Published: 2010)

☞ Plant Genomics
Edited by: Hany A. El-Shemy (Published: 2009)

☞ Methylotrophs and Methylotrophic Communities
Edited by: Ludmila Chistoserdova (Published: 2019)
"highlights the diversity of methylotrophs, their functions, and their potential applications and will be of interest to many" (SIMB News)
