Contents

Preface	5
1 Introduction	7
Maria-Nefeli Tsaloglou and Carmelo R. Tomas	
2 The Cultivation of Marine Phytoplankton	11
Maria G.S. Jutson, Richard K. Pipe and Carmelo R. Tomas	
3 Phytoplankton Gene Expression.....	27
John H. Paul	
4 Marine Microalgae and Harmful Algal Blooms: A European Perspective.....	45
Johanne Arff and Belén Martín Miguez	
5 <i>Emiliana huxleyi</i> in the Genomic Era	73
Bethan M. Jones, Mónica Rouco, M. Débora Iglesias-Rodríguez and Kimberly H. Halsey	
6 Bioluminescent Microalgae.....	107
Martha Valiadi, Charlotte L. J. Marcinko, Christos M. Loukas and M. Débora Iglesias-Rodríguez	
7 Microfluidics and <i>in situ</i> Sensors for Microalgae.....	133
Maria-Nefeli Tsaloglou	

Preface

This book is a dedicated volume on the most recent advances in phytoplankton research. The aim of the book is to introduce the emerging and exciting field of phytoplankton research, and to provide information on the newest developments and applications by leading scientists from around the world.

It will be a useful manual to postgraduate students, as well as to more senior researchers. Although some background knowledge is required, an authoritative chapter on methods of cultivation is included. This provides practical advice, which could prove useful to even the most novice of scientists.

The editor would like to, first and foremost, thank the authors of the book, who gladly volunteered their expertise and made an idea into reality. Finally, the editor would like to acknowledge the patience and support of her partner during long nights and weekends.
